¹Underlying causes of death are based on the *International Classification of Diseases, 10th revision* (ICD–10).

²Unintentional injuries is another term for accidents.

³CLRD is chronic lower respiratory disease.

⁴Stroke is another term for cerebrovascular disease.

⁵Starting with 2011 data, the rules for selecting renal failure as the underlying cause of death were changed, resulting in an increase in the number of deaths for Diabetes mellitus. Therefore, data for diabetes before and after 2011 are not directly comparable. For more information, see *Technical Notes* in Deaths: Final data for 2011, available from: https://www.cdc.gov/nchs/data/nvsr/nvsr63/nvsr63_03.pdf.

⁶Estimates are age adjusted to the year 2000 standard population with unrounded population numbers. See *Appendix II*, Age adjustment.
